

Monks Of New Skete Dogs

The Monks Of New Skete Dogs: A Legacy of Compassionate Training and Canine Wisdom

Nestled in the rolling hills of Cambridge, New York, the Monks of New Skete have built an extraordinary reputation that extends far beyond their spiritual calling. While many know them as a religious community within the Orthodox Christian tradition, they have gained worldwide recognition for something quite unexpected: their profound understanding and training of dogs. The Monks Of New Skete Dogs program has become a cornerstone of modern, humane dog training, influencing thousands of pet owners and professional trainers alike.

For decades, these monks have dedicated themselves to a unique mission—bridging the gap between ancient monastic disciplines and the practical needs of everyday dog owners. Their approach is not merely about teaching commands; it is a philosophy that emphasizes mutual respect, patience, and a deep spiritual connection between humans and their canine companions. This article explores the rich history, training principles, and enduring impact of the Monks of New Skete and their remarkable work with dogs.

The Origins of a Unique Mission

The story of the Monks of New Skete and their involvement with dogs began in the late 1960s. The community was founded in 1966 by a group of Franciscan friars who later transitioned to the Orthodox Church. Initially, they focused on their religious life and the production of icons and liturgical music. However, a simple act of kindness changed their trajectory forever.

A stray German Shepherd appeared at their monastery door. The monks, living a life of hospitality and care for all creatures, took the dog in. This single act of compassion sparked a deep curiosity about canine behavior and training. They soon realized that the principles of patience, observation, and gentle guidance—core tenets of their spiritual practice—could be applied beautifully to working with dogs. What began as a small, informal effort soon grew into a full-fledged breeding and training program.

Today, the Monks of New Skete are perhaps best known for their German Shepherd breeding program, which focuses on producing healthy, well-tempered dogs. But their true legacy lies in their training philosophy, which they have shared through bestselling books, videos, and in-person training sessions.

The Training Philosophy of the Monks Of New Skete Dogs

The training approach developed by the Monks of New Skete is distinct from many mainstream methods. It is rooted in what they call "compassionate leadership." This philosophy rejects harsh, punishment-

based techniques in favor of a relationship built on trust, clarity, and mutual understanding.

Understanding the Canine Mind

The monks believe that effective training begins with understanding how dogs perceive the world. They emphasize that dogs are not small, furry humans; they are sentient beings with their own instincts, emotions, and communication styles. By observing a dog's body language, energy, and responses, a trainer can build a bridge of communication that goes beyond simple commands.

Central to their method is the idea of **calm-assertive leadership**. This does not mean dominance in the traditional, aggressive sense. Instead, it means being a reliable, consistent, and trustworthy guide for your dog. When a dog feels secure in their leader's presence, they are more relaxed, focused, and eager to learn. The monks often say that a dog's greatest need is for a leader who is both strong and gentle.

Key Principles of Their Approach

- **Patience over Pressure:** Training should never be rushed. The monks advocate for slow, steady progress that respects the individual learning pace of each dog. Pressuring a dog into obedience through fear or intimidation can damage the bond and lead to behavioral issues.
- **Observation Before Action:** Before any training session begins, the monks spend time simply watching the dog. They look for signs of stress, excitement, confusion, or readiness. This observation allows them to tailor their approach to the dog's current state of mind.
- **Relationship First:** For the Monks of New Skete, training is not a set of exercises; it is a continuous conversation. Every interaction—whether it is a walk, a meal, or a training session—is an opportunity to strengthen the bond between human and dog. A strong relationship is the foundation upon which all learning is built.
- **Consistency and Structure:** Dogs thrive on routine and clear expectations. The monks recommend establishing consistent rules and boundaries within the home. When a dog understands what is expected of them, they feel more secure and are less likely to develop anxiety or unwanted behaviors.

The Famous German Shepherd Breeding Program

While the monks offer training for all breeds, their heart lies with the German Shepherd. The Monks of New Skete German Shepherds are renowned for their excellent temperament, intelligence, and health. The breeding program is small and selective, with a strong emphasis on preserving the breed's working abilities while ensuring that each puppy is raised with the utmost care and socialization.

Puppies from the monastery are not simply bred and sold. They are raised with a philosophy known as the **"New Skete Method"**, which involves early neurological stimulation, gentle handling, and exposure to various environments from a very young age. This early socialization helps produce dogs that are

Visiting the Monastery: A Unique Experience

Prospective puppy owners often go through a rigorous application process. The monks want to ensure that each dog finds a home that aligns with their temperament and needs. This commitment to responsible breeding and placement has earned them a loyal following and a waiting list that can span years.

Publications and Media Impact

The wisdom of the Monks of New Skete dogs has reached a global audience through their publications. Their book, "*How to Be Your Dog's Best Friend*", first published in 1978, has become a classic in the field of dog training. It has been revised and updated over the years and remains a go-to resource for dog owners seeking a humane, holistic approach.

Their other notable works include "*The Art of Raising a Puppy*" and "*Divine Canine: The Monks' Way to a Happy, Obedient Dog*". These books are not simply training manuals; they are philosophical guides that explore the spiritual dimension of the human-animal bond. The monks write with a clarity and warmth that resonates with readers, offering practical advice grounded in years of firsthand experience.

Television and Online Presence

In addition to books, the monks have produced training videos and have been featured in numerous television programs and documentaries. Their calm, measured teaching style translates well to the screen, and their advice is often cited by professional trainers as being both insightful and accessible. Their online platform includes articles, videos, and information about their breeding program, making their resources available to a global audience.

Controversy and Criticism: A Balanced Perspective

No discussion of the Monks of New Skete dogs would be complete without acknowledging the controversy that has surrounded some of their historical training methods. In earlier editions of their books, the monks advocated for techniques such as the "alpha roll"—a physical correction used to assert dominance. In recent years, this method has come under scrutiny from modern animal behaviorists, who argue that such techniques can be stressful and potentially harmful to dogs.

To their credit, the monks have listened to the evolving science of canine behavior. In later revisions of their work, they have moved away from forceful corrections and now emphasize positive reinforcement and relationship-based training. This willingness to adapt and grow is a testament to their genuine commitment to the well-being of dogs. They have publicly acknowledged that some of their earlier methods were not ideal and have embraced a more compassionate, science-informed approach.

This evolution highlights an important point: no training method is static. The monks' ability to learn, change, and refine their techniques over the decades is a mark of their integrity and their deep respect for the animals they serve.

For those who wish to experience the monks' approach firsthand, the New Skete monastery offers a variety of programs. They host training sessions, retreats, and seminars on dog behavior and care. Visitors can walk the grounds, meet the dogs, and observe the monks in their daily work. The atmosphere is one of tranquility and purpose, blending the rhythms of monastic life with the joyful energy of well-trained dogs.

The monastery also operates a small gift shop where visitors can purchase books, videos, and other resources. Additionally, the monks are known for their delicious cheesecakes and other baked goods, which are sold as a fundraiser for their community and their canine programs. This combination of spirituality, craftsmanship, and canine expertise makes a visit to New Skete a truly unique experience.

The Spiritual Dimension of Canine Companionship

One of the most distinctive aspects of the Monks of New Skete dogs philosophy is its spiritual grounding. The monks frequently draw parallels between the discipline of training a dog and the discipline of the spiritual life. Both require patience, consistency, humility, and a willingness to listen. Both are built on relationships of trust and love.

For the monks, dogs are not just pets; they are teachers. They teach us about presence, loyalty, forgiveness, and unconditional love. A dog's ability to live in the moment is a lesson in mindfulness. Their unwavering devotion is a reflection of divine love. The monks often say that caring for a dog is a form of prayer—a living, breathing practice of compassion and stewardship.

This spiritual perspective adds a layer of depth to their training advice. They encourage owners to approach their dogs not as projects to be fixed, but as companions to be honored. This shift in mindset can transform the entire experience of living with a dog, turning everyday interactions into opportunities for growth and connection.

Practical Tips from the Monks of New Skete Dogs

While the monks' philosophy is profound, they also offer plenty of practical, actionable advice for everyday dog owners. Here are some key takeaways:

- **Start Early:** Socialization and basic training should begin as early as possible. Puppies are most receptive to new experiences between 8 and 16 weeks of age.
- **Use Positive Reinforcement:** Reward desired behaviors with treats, praise, or play. This creates a positive association and encourages your dog to repeat the behavior.
- **Be Consistent:** Use the same command words and hand signals each time. Ensure that all family members follow the same rules to avoid confusing your dog.
- **Practice Patience:** Dogs learn at different rates. If your dog is struggling with a command, take a step back and break the task into smaller steps. Never punish confusion.
- **Walk with Purpose:** The walk is not just for exercise; it is a training opportunity. Walk with confidence and calm energy, and encourage your dog to focus on you.
- **Create a Routine:** Dogs feel secure when they know what to expect. Establish regular times for meals, walks, training, and rest.

- **End on a Positive Note:** Always finish training sessions with a success, even if it is a simple command your dog knows well. This builds confidence and leaves a positive impression.

These tips, while simple, are backed by decades of experience and a deep understanding of canine psychology. The monks' advice is timeless because it is rooted in respect for the dog as a sentient being.

The Future of the Monks Of New Skete Dogs Legacy

As the monks age and the community evolves, questions naturally arise about the future of their dog program. The monastery continues to breed German Shepherds and offer training resources, but they are also training the next generation of trainers and caretakers. Their books and videos will continue to educate and inspire dog owners for decades to come.

The legacy of the Monks of New Skete dogs is not just in the dogs they have trained or the books they have written. It is in the countless people they have taught to see their dogs as partners rather than possessions. It is in the shift toward more humane, compassionate training methods that has taken place

across the dog training world. And it is in the quiet, powerful example they have set of a life lived with purpose, patience, and love for all creatures.

Conclusion

The Monks of New Skete dogs represent a remarkable intersection of spirituality, discipline, and canine care. From humble beginnings with a single stray dog, they have built an enduring legacy that has touched the lives of dog owners around the world. Their training philosophy—rooted in compassion, observation, and calm leadership—offers a humane and effective path to a harmonious relationship with our canine companions.

Whether you are a first-time dog owner or a seasoned professional, the teachings of the Monks of New Skete offer valuable insights that go beyond simple obedience. They remind us that training is not about control; it is about connection. And that the bond between a human and a dog, when nurtured with patience and love, can be one
