

2008 Ford Focus Consumer Reports

2008 Ford Focus Consumer Reports: A Comprehensive Look at a Compact Icon

When the automotive world looks back at the late 2000s, few compact cars command as much attention from value-conscious buyers as the 2008 Ford Focus. For decades, the Ford Focus has been a staple of American driveways,

offering a blend of affordability, practicality, and driving dynamics that few competitors could match. But what does the 2008 Ford Focus Consumer Reports data actually reveal? Is this model year a hidden gem, or one best left in the past? In this detailed analysis, we will dive deep into the strengths, weaknesses, reliability scores, road test results, and overall value of the 2008 Ford Focus, helping you decide if this compact car deserves a spot in your garage. We will explore everything

from engine performance and interior comfort to safety ratings and long-term ownership costs, all through the lens of trusted Consumer Reports evaluations and real-world owner feedback.

Overview of the 2008 Ford Focus

The 2008 Ford Focus arrived as part of the second generation of this popular compact nameplate, which had been redesigned for the 2005 model year. By 2008, Ford had refined the Focus into a mature, well-rounded offering. The 2008 model was available in several body styles, including a four-door sedan and a two-door coupe, and came in a variety of trim levels such as the S, SE, SES,

and the sporty ST. Under the hood, the 2008 Ford Focus featured a 2.0-liter Duratec four-cylinder engine that produced 140 horsepower and 136 lb-ft of torque. This engine was paired with either a five-speed manual transmission or a four-speed automatic.

What sets the 2008 Ford Focus apart in the compact segment is its European-inspired chassis tuning. Unlike many of its competitors that prioritized soft rides over handling, the Focus offered a genuinely engaging driving experience. The suspension setup, which included a control-blade independent rear suspension, was a rarity in this class and provided excellent composure through corners. This

made the 2008 Ford Focus Consumer Reports road test scores particularly interesting, as the publication has always valued handling and steering feel in its evaluations.

Consumer Reports Road Test Performance

According to historical data from Consumer Reports, the 2008 Ford Focus earned respectable scores in road tests, though it did not quite reach the top tier of the compact segment. The publication praised the Focus for its agile handling, responsive steering, and composed ride quality. Test drivers noted that the car felt stable at highway speeds

drive on twisty back roads. The independent rear suspension was highlighted as a key differentiator, providing better traction and a more planted feel than many competitors with torsion-beam rear axles.

However, the 2008 Ford Focus Consumer Reports road test also pointed out some shortcomings. The 2.0-liter engine, while adequate, was not particularly refined. It could sound coarse when pushed hard, and acceleration was described as modest rather than sprightly. The four-speed automatic transmission was a notable weak point, as it often felt indecisive and unresponsive compared to the more modern units found in rivals like the

and was genuinely fun to drive. The 2008 Ford Focus Consumer Reports road test also pointed out some shortcomings. The 2.0-liter engine, while adequate, was not particularly refined. It could sound coarse when pushed hard, and acceleration was described as modest rather than sprightly. The five-speed manual transmission was the preferred choice for enthusiasts, offering crisp shifts and better control over engine output.

Braking performance was generally solid, with short stopping distances from 60 mph. The cabin was noted for being reasonably quiet at cruising speeds, though wind and road noise became more apparent on coarse pavement. Fuel economy, as reported by Consumer Reports, was competitive for the era, with the manual transmission achieving around 24 mpg city and 33 mpg highway in real-world testing. The automatic version delivered slightly lower figures, typically around 22 mpg city and 30 mpg highway.

Reliability and Owner Satisfaction

One of the most critical aspects of any used car purchase is reliability, and the 2008 Ford Focus Consumer Reports reliability ratings tell a mixed story. On the positive side, the 2008 Focus earned an average to above-average predicted reliability rating for its time. Many owners reported trouble-free ownership experiences, with the engine and transmission proving to be durable over the long haul. The 2.0-liter Duratec engine, in particular, has a reputation for longevity when properly maintained.

However, the 2008 Ford Focus is not without its

2008 Ford Focus Consumer Reports

known problem areas. Consumer Reports data, combined with owner surveys, reveals several recurring issues that buyers should be aware of:

- **Engine mounts:**

The motor mounts on the 2008 Focus were prone to premature failure, leading to excessive vibration and a rough idle. This is a relatively inexpensive fix but can be a nuisance.

- **Power window regulators:** Rear and front power window regulators were known to fail, causing windows to become stuck or operate erratically.

- **Alternator**

failure: Some

owners reported alternator failures, often resulting in a dead battery or electrical system warnings.

- **Rear drum**

brakes: The rear drum brakes were not as durable as disc brakes and could wear unevenly, leading to noise and reduced braking efficiency over time.

- **Steering system**

quirks: A small number of owners experienced issues with the power steering system, including a whining noise or intermittent loss of assist.

Despite these issues,

owner satisfaction for the

2008 Ford Focus was generally favorable. Consumer Reports surveys indicated that most owners would buy the car again, citing its fun driving dynamics, spacious interior, and affordable price point as key reasons. The Focus also scored well in terms of predicted maintenance and repair costs, which were lower than some of its European and Asian competitors.

Interior Comfort and Features

Step inside the 2008 Ford Focus, and you will find a cabin that prioritizes function over flair. While the interior materials were not class-leading, they were durable and well-assembled. The seats were comfortable for long drives, with

adequate bolstering for both front and rear passengers. The 2008 Ford Focus Consumer Reports evaluations noted that the front seats offered good support, though some testers wished for more lumbar adjustment. Rear legroom was impressive for a compact car, making it feasible to seat two adults comfortably in the back. Three adults would be a tight fit, but that is typical for this segment.

The dashboard layout was straightforward and logical, with large, easy-to-read gauges and intuitive climate controls. Available features included power windows, keyless entry, cruise control, and a six-speaker audio system with an auxiliary input jack.

2008 Ford Focus Consumer Reports

Higher trim levels added features like a sunroof, leather-wrapped steering wheel, and upgraded upholstery. The 2008 Ford Focus Consumer Reports team appreciated the simplicity of the controls, noting that everything was within easy reach and required minimal distraction to operate.

Cargo space was another strong point for the 2008 Focus. The sedan offered a generous 13.8 cubic feet of trunk space, which was among the largest in the compact class. The coupe, while sacrificing some rear headroom, still provided a usable trunk for everyday errands. The rear seats in both body styles could be folded down to accommodate

the car's versatility.

Safety Ratings and Crash Test Performance

Safety was a priority for Ford when developing the 2008 Focus, and the results from independent testing agencies reflect this. The 2008 Ford Focus performed well in crash tests conducted by the National Highway Traffic Safety Administration (NHTSA) and the Insurance Institute for Highway Safety (IIHS). NHTSA awarded the Focus four out of five stars for frontal and side crash protection, which was competitive for its time. The IIHS rated the Focus as "Good" in its frontal offset crash test, the

highest possible score.

& Yu • Books are a uniquely portable magic. • Page 7

Standard safety features on the 2008 Ford Focus included dual front airbags, side-impact airbags for the front seats, and side curtain airbags for both rows. Antilock brakes (ABS) were standard on most trims, and traction control was available on higher-end models. The 2008 Ford Focus Consumer Reports safety overview highlighted that these features were reasonably comprehensive for a compact car in that era, though electronic stability control, which is now mandatory, was not standard across all trims. Buyers looking for the safest possible configuration should seek out models equipped with ABS and traction control.

One area where the

Focus lagged behind some competitors was in its headlight performance. Consumer Reports tests rated the headlights as fair, with limited visibility on low beams. This is a common complaint among owners and is something to consider if you frequently drive at night or on unlit roads.

Comparing the 2008 Ford Focus to Its Rivals

To fully appreciate the 2008 Ford Focus Consumer Reports position in the market, it is helpful to compare it to its primary competitors: the Honda Civic, Toyota Corolla, Mazda3, and Chevrolet Cobalt. Each of these cars offered a different blend of

2008 Ford Focus Consumer Reports

attributes, and the Focus stacked up well in several key areas.

The Honda Civic was the class leader in terms of refinement, interior quality, and resale value. However, it was also more expensive to buy used and lacked the engaging driving experience of the Focus. The Toyota Corolla was the benchmark for reliability and fuel economy, but its driving experience was numb and uninspiring. The Mazda3 was the Focus's closest rival in terms of driving fun, offering sharp handling and a responsive engine. However, the Mazda3 had a smaller rear seat and less cargo space than the Focus. The Chevrolet Cobalt was a well-rounded competitor

cheaper interior and less impressive build quality.

Where the 2008 Ford Focus truly shined was in its value proposition. It offered a premium driving experience at a price point that was often several thousand dollars lower than comparable Civics and Corollas. The 2008 Ford Focus Consumer Reports cost-of-ownership analysis confirmed that the Focus was one of the more affordable compacts to maintain and insure, making it an excellent choice for budget-conscious buyers.

Common Modifications and Aftermarket Support

but suffered from a One of the enduring

appeals of the 2008 Ford Focus is its strong aftermarket community. Enthusiasts have developed a wide range of modifications for this platform, from suspension upgrades to engine performance parts. The 2008 Ford Focus Consumer Reports data does not directly cover modifications, but the enthusiast community has been vocal about the car's potential. Common upgrades include:

1. **Cold air intakes and exhaust systems:** These can add a few horsepower and improve engine sound without sacrificing reliability.
2. **Aftermarket suspension components:**

Lowering springs, performance shocks, and upgraded sway bars can further enhance the already impressive handling.

3. **Software tunes:** ECU remapping can improve throttle response and overall drivability.
4. **Wheel and tire upgrades:** Lighter alloy wheels and high-performance tires can significantly improve grip and steering feel.

For owners who simply want a reliable daily driver, the 2008 Ford Focus is a rewarding platform to maintain and personalize. The availability of affordable

parts and extensive online forums makes DIY maintenance accessible to even novice mechanics.

Fuel Economy and Real-World Driving

Fuel efficiency remains a top priority for compact car buyers, and the 2008 Ford Focus delivers respectable numbers even by today's standards. The 2008 Ford Focus Consumer Reports fuel economy tests recorded an average of 24 mpg in combined city and highway driving with the automatic transmission, and approximately 27 mpg combined with the manual. Many owners report achieving slightly higher figures with conservative driving habits, often exceeding 30 mpg on long highway trips.

The fuel tank capacity of 13.2 gallons provides a realistic driving range of approximately 350 miles between fill-ups, which is ample for daily commuting and weekend road trips. The Focus runs on regular unleaded gasoline, keeping operating costs low. In an era of rising fuel prices, the 2008 Focus remains a sensible choice for those looking to minimize their fuel budget without sacrificing driving enjoyment.

Long-Term Ownership Experience

What is it like to live with a 2008 Ford Focus over the long term? Based on extensive feedback from owner

forums and Consumer

Reports, the experience is generally positive, though not without its quirks. The engine and drivetrain are robust, with many examples surpassing 200,000 miles with routine maintenance. The interior holds up reasonably well, though plastics can become brittle with age and exposure to heat. The paint quality on some examples has been criticized for being thin and prone to chipping.

Rust is not a major issue for most 2008 Focus models, but owners in

colder climates should inspect the undercarriage for corrosion, particularly in areas where road salt is used. The exhaust system and brake lines can be vulnerable to rust over extended periods. Regular maintenance, including oil changes every 5,000 miles, transmission fluid changes, and coolant flushes, will go a long way toward ensuring long-term reliability.
